1. **Is permission required from the government in order to plant, commercialize, import or export products that have been genetically modified or engineered ("GMOs")?**

No.

2. **Is local presence required in order to be considered a duly registered distributor where the GMO is going to be imported and sold?**

No.

3. **Which governmental authorities are involved in the determination of the regulations involving GMOs (for example, food and agriculture, environmental, health, safety)?**

Not applicable

4. **Are local performance and/or environmental safety studies required to obtain the permit to plant, commercialize, import or export GMOs, or are studies carried out in the country of origin of the GMO where it has already been certified, valid or accepted?**

No.

5. **Does the permission granted by the Government authorize the consumption of GMOs by human beings? Are there specific rules for the consumption of GMOs?**

No.

6. **Is governmental permission required for foreign companies to commercialize, import or export pesticides, insecticides, rodenticides and/or their consumables?**

No state specific requirements for sale--there are state specific chemical application regulations.

7. **Is local presence required in order to be a registered or authorized distributor where the pesticides, insecticides, rodenticides and/or their consumables are going to be imported and sold?**

No.

8. **Which governmental authorities are involved in the determination of the environmental health and safety of pesticides, insecticides, rodenticides?**

Nebraska Department of Environmental Quality

9. **Are local performance and/or environmental safety studies required to obtain the authorization to market pesticides, plaguicides, rodenticides, insecticides, or are studies carried out in the country of origin of the products, valid or accepted?**

No.

10. **Is a prescription by a qualified professional required in the herbicides commercialization? If the answer is "YES", what is the professional that grants such prescription?**

No, but when fertilizers are commercially spread, applicators require certification by the NDEQ under the Nebraska Chemization Act.
